France Telecom Adopts South River Technologies' WebDrive

WebDrive Technology Enhances DSL Service in Europe

Annapolis, MD – October 18, 2005 – South River Technologies (SRT) announced today that European based France Telecom has adopted SRT's WebDrive technology to enhance their online service. WebDrive allows users to securely access remote files through a virtual hard drive.

European based LinkUall, a systems integrator that provides solutions to large scale service providers, was searching for a virtual drive interface to online storage for ISP customer France Telecom. France Telecom offers the product to their DSL business class customers with file sharing and storage capabilities. The solution provides the DSL business user with both a shared and private drive. The shared drive can be accessed by business associates who need to view or collaborate on documents.

Through extensive research, LinkUall found WebDrive to be the right solution for their customer's needs. After localizing WebDrive in French, LinkUall built a solution that was completely private-labeled for France Telecom. The solution included WebDrive as the client, as well as a custom WebDAV based server application.

"WebDrive's intuitive drive letter interface has provided France Telecom with a complete solution that is branded as their own," says Tracy Welsh, VP of Business Development for South River Technologies. "France Telecom now offers an improved customer experience while reinforcing the value of their brand."

About LinkUall

LinkUall provides carrier-grade solutions to large service providers. Solutions focus on a compact architecture, very low integration and ownership costs, and scalable to a very large subscriber base. Solutions are feature rich, with interfaces to third party applications.

The first linkUall Carrier solution was deployed in early 2000 in a mass-market environment, and since then, linkUall has continued to deploy solutions in close collaboration with Customers and Integrators, as well as technology partners. linkUall offices are located in Bordeaux, France and Paris, France.

About France Telecom

France Telecom Mobile Satellite Communications is a wholly owned France Telecom subsidiary marketing mobile satellite services. The company has a highly active distribution network abroad (200 distributors) and nine sales offices. The Group is constructing tomorrow's services by multiplying offers based on abundance and innovation and by proposing products which are very easy to use for building a multi-service network in the heart of every home.

About South River Technologies

South River Technologies develops Internet file management software for file collaboration, website management and secure access. SRT's unique client technology creates an instantly familiar interface by integrating seamlessly into the Windows operating system. Founded in 1996, South River Technologies directly sells its product and licenses its technologies to software vendors and online service providers.
